

# Animals in Danger

Today let's speak about some animals on our planet. Many animals and birds on the Earth are disappearing.

Many birds and animals are disappearing.

Modern life is bad for them. The air is not fresh. The water is not clean.

We can find their names  
in the Red Book.

We must save wild animals.

We must take care of nature.

# ANIMALS IN DANGER

Ever since people lived on Earth, they have used animals, plants to give them everything they need.

Animals are killed for meat and skin, trees are cut down for paper, plants uprooted for food, minerals are dug from ground. We know that the supply of animals and plants is not ENDLESS!!!
